[Law Review name and address]

March 20, 2025

Dear journal editor:

Coming out of the hottest year in recorded history, and with recent executive orders shifting the United States's climate stance, the urgency of global climate change mitigation has never been greater. Though much environmental discussion is rightfully directed at energy sources, comparatively little is said about another major climate aggravator: industrial farming. Against scientific recommendations, many large-scale farming practices continue to harm the environment by depleting soil nutrients and polluting with pesticides.

This article explores food sovereignty as a powerful yet oft-overlooked approach to sustainable food production, arguing that implementing food sovereignty on an international scale would help the United Nations accomplish its climate goals. In addition to specifically describing the benefits of food sovereignty in fighting climate change, the article examines the barriers to its widespread adoption and suggests means of implementing it on the global stage, serving as a blueprint for future potential action. This article will hopefully stimulate attention to the ideology's potential to protect Earth's resources and peoples.

Please let me know if you have any questions about the article, and thank you for your consideration.

Sincerely,

[FirstName LastName]
